SISTEMA JACKPOT CONTROLLER

JACKPOT CONTROLLER SYSTEM

It is an [interconnection system](#) developed for casinos and salons to interconnect gaming machines to a common Jackpot system.

Our system has the technology to [support the amount of Jackpots that the operator requires](#) as well as their [management in terms](#) of the growth system, of the prize and the range in which you want it to be made.

The [Jackpot system is fully configurable](#) from the beginning of its installation and then during the course of it. It has the [possibility of configuring a value of start, the value of the prize, and this is completely customizable independently for each Jackpot](#), in the case of having several prizes at the same time.

The interconnection system is divided into [2 parts Hardware](#). One of them is installed in [the gaming machine that the operator wishes to participate and add to the Jackpot prize](#) (it obtains accounting through the SAS system or mechanical counters), and the other, a [central PC that will be the controller of all the machines](#) and who will manage the luck of the Jackpots and the control of what is played per machine.

The system has a [data and information storage system](#), where the operator can consult through a web page previously configured for it ([WebReporting](#)), the [counters of each terminal](#) or the [historical prizes \(Jackpots\)](#) delivered for operator analysis.

Additionally, you will have a series of tools for each of the terminals you wish to analyze. These tools range from the respective [analysis of each machine](#), of a [set of selected machines](#), or the [entire park](#) that is available and connected to the system.

When accessing, you will have a [central panel with all the terminals connected to the system and all the information of each](#) such as; Name and description of the machine, serial number, location, installed system version, among others.

Chart of collections per week

Graph that shows the collection grouped by week of all the gaming terminals.

Accumulated historical collection

The graph shows the accumulated collection of all game terminals since the start of monitoring.

Our *Jackpot* system has two name and graphic options, *Atila Gold* and *Thunder Strike*. It can be viewed on screens through a PC video signal controller, the graph where the growth of the prizes established according to the operator's requirements will be displayed. Using the Hardware that is connected to each terminal, you can optionally display these contents in a Topper Sign in the cabinet itself.

PRIZE VIDEOS

The Jackpot system has automated animation videos where when leaving the selected prize will begin its automatic reproduction on all the screens that are connected to the system and to the room. These videos will be previously configured together with the entire system according to the operator's requirements.

SMI2000 Soluciones Mecánicas Integrales, applies a policy of continuous development of its products and reserves the right to make changes in specifications, spare parts and prices, without prior notice.
